ABSTRACT

This report presents information in two parts about six categories of students. The first section of Part I deals with the migration of all students attending all institutions. The second section presents information about all students attending publicly controlled institutions, and the third section presents information about all students attending privately controlled institutions. A second part of the report deals with undergraduate students. The first section of this part presents information about the migration of all undergraduates. The second section deals with information about all undergraduates attending publicly controlled institutions, and the third section deals with all undergraduates attending privately controlled institutions. Institutions included in this survey were: universities, liberal arts colleges, teachers colleges, technological schools, theological and religious schools, schools of art, other independently organized professional schools, and junior colleges; in other words, all institutions of higher education in the U.S. whose programs of work are wholly or principally creditable toward a bachelor's or higher degree. FOREWORD

The members of the Advisory Committee on Higher Education of the Midwestern Conference of the Council of State Governments are appointed by the respective state Commissions on Interstate Cooperation. The Committee is Advisory to the Conference in matters pertaining to post-high school education, including public, private, short course, baccalaureate, vocational and graduate university programs. The Committee Chairman is Donald H. Clark, Assistant Vice President and Treasurer of the University of Indiana. The Committee and the Conference are served by the Midwestern Office of the Council of State Governments, with James H. Bowhay, Regional Director.

The study was compiled by Dr. G. J. Froehlich and Dr. R. C. Carey in connection with Dr. Earl W. Porter of the University of Illinois. The Conference is indebted to them and to the Advisory Committee for their assistance in production of this very useful study on the movement of college students in, around and out of our Twelve-State Area. The study is based on data provided by the National Center for Educational Statistics of the United States Office of Education, and the Conference wishes to express its deep appreciation for the unusual cooperation afforded the Committee and the authors by the officers of the U. S. Office of Education.

Harold V. Froehlich
Speaker of the Wisconsin Assembly, and
Chairman, Midwestern Conference of the
Council of State Governments

INTRODUCTION

The basic data in this report have been obtained from HEGIS reports submitted to the Office of Education, Department of Health, Education, and Welfare, Washington, D. C. Later this year the Office of Education will publish information entitled The Survey of Residence and Migration of College Students, Fall 1968: Basic Matrix Tables.

This report presents information in two parts about six categories of students. The first section of Part I deals with the migration of all students attending all institutions.¹ The second section presents information about all students attending publicly controlled institutions,² and the third section presents information about all students attending privately controlled institutions.³ A second part of the report deals with undergraduate students. The first section of this part presents information about the migration of all undergraduates.⁴ The second section deals with information about all undergraduates attending publicly controlled institutions,⁵ and the third section deals with all undergraduates attending privately controlled institutions.⁶

Institutions included in the 1968 Office of Education survey were: universities, liberal arts colleges, teachers colleges, technological schools, theological and religious schools, schools of art, other independently organized professional schools, and junior colleges--in short, all institutions of higher-education in the aggregate United States (the

50 States, the District of Columbia, and the outlying areas) whose programs of work are wholly or principally creditable toward a bachelor's or higher degree.

Two groups of students were excluded from this report: first, were those students enrolled in any institution only as extension students; second, were students enrolled in occupational programs designed to prepare for immediate employment and not chiefly creditable toward a baccalaureate or higher degree.

"Home State" was defined as the state of the student's permanent residence. (For an out-of-state student this is the state of his permanent home address, as distinguished from his local address.)

Grateful acknowledgement is made to the National Center for Educational Statistics of the Office of Education for permitting the release of these data prior to the publication of the basic tables later this year. Special thanks are due to Mrs. Dorothy M. Gilford, Assistant Commissioner for Educational Statistics and Director of the National Center for Educational Statistics, Mr. Sidney Shulman, Director of the Division of Survey Planning and Analysis, Mr. Theodore H. Drews, Chief of the Higher Education Surveys Branch, and Mr. George H. Wade, Survey Statistician.

Special thanks are also due to Mrs. Helen Wright, Mrs. Joyce Jones, Mrs. Betty Nixon, and Miss Dorothy Chang for compiling and tabulating the data from the individual tables. Appreciation is also due the Midwestern Advisory Committee on Higher Education to the Council of State Governments, for their help in determining the categories for inclusion in the following report.

Needless to say, any mistakes either in the data itself or the interpretation of the data is the sole responsibility of the authors.

PART I

SECTION I

All Students, All Institutions

In the fall of 1968 there were more students whose homes were in the Twelve-State Area (the Great Lakes and Plains Regions) attending institutions of higher-education in this country than from any other region in the United States (See Table 1). There were also more students attending institutions of higher-education in the Twelve-State Area than in any other region. Twenty-six point eight percent (26.8%) of all students attending institutions of higher-education were from the Twelve-State Area. This represents, however, a slight decrease from the 1963 percent of 27.1. Twenty-seven point nine percent (27.9%) of all students attending higher-education institutions attended institutions within the Area. However this is a slight decrease from the 1963 percentage of 28.2 percent. These do not appear as too surprising statistics when one considers that the population of the Twelve-State Area represents 27.9 percent of the total for the fifty States and the District of Columbia, and thus is larger than any of the other regions. Three other regions had higher or the same percentage of resident students than that of the Twelve-State Area (See Table 2).

The fact that the Twelve-State Area had the largest in-migration of any of the regions is a tribute to the depth and quality of the higher education systems in these twelve states.

Within the Twelve-State Area there are varying patterns of student migration. When one considers in-migration as a proportion of the total student body, Iowa and Indiana in 1968 had the largest percentage, while Michigan and Illinois had the smallest (See Table 3). When we consider net migration, i.e., the difference between migration into and out of the state, we find that in numbers of students, Indiana and Michigan had the largest net in-migration in 1968 while Illinois and North Dakota had a net out-migration (See Table 4) in 1968.

The following maps show, for each of the states in the Twelve-State Area, the particular pattern of migration of students attending institutions of higher education. There is no attempt in this report to explain why the migration pattern of any state is as it is. Each state will be able to interpret its own statistics in light of its system of higher education and in light of the several other factors which influence student migration. The map on page 7 is a pictorial presentation of Table 4. The map on page 8 shows the proportion of student enrollment representing students whose homes were in the Twelve-State Area. The next dozen maps (pages 9 to 20) show student flow, state by state, within the Area. Finally, in order that each of the states will have available for reference the total picture of migration, United States maps (pages 21 to 32) are presented.

PART I

SECTION II

All Students, Publicly Controlled Institutions

In the fall of 1968, as in 1963, there were more students whose homes were in the Twelve-State Area attending public institutions in this country than from any other region. Also, as in 1963, there were more students attending public institutions in the Twelve-State Area than in any other region (See Table 5).

There was however a slight decrease in 1968 over 1963 in both the percent of students attending and in the number of students enrolled in public institutions from the Twelve-State Area. The percent of the total enrolled in public higher-education institutions in the Twelve-State Area was still almost 30 percent of the total enrollment in public institutions in the United States.

While three other regions did have higher percentages of all resident students attending public institutions than the Twelve-State Area, because of the large in-migration of students to these institutions, the totals again reflect the quality and extensiveness of the system of public higher education in these twelve states.

Within the Twelve-State Area there are varying patterns of student migration. When one considers in-migration as a proportion of the total student body of publicly controlled institutions, Iowa and Indiana had the largest percentage in both 1963 and 1968.

However while Illinois remained the state with the smallest percentage of students received in 1968, Michigan replaced Minnesota as the state having the second smallest percentage in 1968. (See Table 7.)

In terms of net migration Michigan again had the largest net in-migration in 1968 but Wisconsin displaced Indiana as the number two state in net in-migration. Illinois again in 1968 led the way in exporting more students than any other state, with a net out-migration of 23,896. Iowa again was the only other state to show a net out-migration (3,324) as indicated in Table 8.

As in the previous section the following maps indicate the particular pattern of migration of students attending public institutions in 1968. The first two maps summarize the net migration pattern and proportion of student enrollments from the Twelve-State Area. The next dozen maps show the student flow, state by state within the Area, and finally the final twelve maps reflect the data for all of the United States.

SECTION III

All Students, Privately Controlled Institutions

When we consider all students who attended privately controlled institutions in the fall of 1968, we find that the Twelve-State Area, while providing only 23.4 percent of the total of all students, compared with 24.8 percent in 1963, had 25.5 percent of the total in attendance. This is however down from the 26.4 percentage figure recorded in 1963.

As was the case with public institutions, the pattern of migration of the states within the Twelve-State Area varies considerably. Viewing in-migration as a proportion of the total student body attending private institutions, we see that Nebraska had replaced Indiana, the 1963 leader, as the greatest importer of students as a proportion of all students enrolled. In another significant change Illinois had moved from the third smallest importer, in terms of proportion of students enrolled, to the smallest in 1968, with only 27.4 percent. This was, however, a two percentage point increase over its total in 1963. Particularly notable is the fact that all states in the Area, except Missouri, showed an increase, in 1968 over 1963, in the proportion of in-migrants as a part of the total student body (See Table 11). When we look at net migration we again find that Indiana and Missouri had the largest numbers of in-migrants in 1968 and that Illinois again led the out-migration totals with 8,558 students. However, in 1968 the state of North Dakota was the only other state to show a net out-migration of students in privately controlled institutions whereas in 1963 five states showed a net out-migration (See Table 12).

The Mid-East Region again provided more students who attended private institutions everywhere; also there were more students attending private institutions in that region. However, in both cases the percentage figures declined slightly in 1968 over 1963 from 35.2 percent to 34.7 percent, and 33.8 percent to 31.8 percent (See Table 9). The Mid-East Region in 1968 also had the highest percentage of resident students, 85.4 percent, in their private institutions, but this was 1.1 percentage points less than that recorded in 1963. The Far-West Region was next with 82.7 percent while the Twelve-State Area fell from third to fourth place with only 78.8 percent of its resident students attending a private college in their home region.

The state maps which follow present the specific pattern of migration of students attending private institutions within the Twelve-State Area. It should be repeated that this report makes no attempt to interpret the particular migration pattern of any of the states. The map on page 69 is a pictorial presentation of Table 12. The map on page 70 shows the proportion of students whose homes are in the Twelve-State Area. The next twelve maps reflect student flow, state by state. Finally the United States maps are repeated for the privately controlled institutions category.

SECTION I

Undergraduate Students, All Institutions

The second part of this report is concerned with undergraduate students attending institutions of higher education. In this category the Twelve-State Area had more students attending institutions of higher education in all regions than any of the other regions, in both 1963 and 1968. Of the total, 27.2 percent of all undergraduates are from this Area in 1968 compared with 27.5 percent in 1963. Also, 28.1 percent of all undergraduates are going to school in the Area in 1968, a slight decrease from the 28.4 percent attending in 1963. Here again these percentages are quite comparable with the 27.9 percent of the nation's population who live in the Twelve-State Area (See Table 13).

Again the Mid-East Region and the Far-West Region have higher proportions of resident undergraduate students and all regions except the Southeast Region show a slightly higher proportion of resident students remaining within their Area.

The pattern of undergraduate migration is similar to that of all students in 1968 and in 1963. Looking at in-migration as a proportion of the total undergraduate student body, Iowa and Indiana again had the highest proportions of in-migrants and Michigan and Illinois again had the lowest. What does appear significant however is that all twelve states showed a decline in the proportion of in-migrants to total undergraduates enrolled when compared with the 1963 percentages (See Table 15).

The net migration picture is similar to that of all students. Indiana and Wisconsin had the largest net in-migration while Illinois and North Dakota had net out-migration. Illinois showed an increase in 1968 over 1963 of 13,330 students leaving the state to pursue undergraduate education (See Table 16).

As indicated in the previous sections of this report, there is no attempt here to analyze the specific migration pattern of any of the states in the Area. The map on page 100 reflects the statistics in Table 16. The map on page 101 indicates the proportion of the undergraduate student body whose homes were in the Twelve-State Area. Maps (pages 102 to 113) are again presented for each state in the Area showing the actual change, and for additional reference, United States maps are included (pages 114 to 125).

PART II

SECTION II

Undergraduate Students, Publicly Controlled Institutions

The second section of this part deals with undergraduate students enrolled in publicly controlled institutions. In this category the Twelve-State Area again had more students attending public institutions everywhere, and in the Area in 1968, than any of the other regions. Of the total, 28.2 percent of the undergraduates attending public institutions are from the Area and 28.6 percent of the undergraduates are going to school in the Area. These 1968 percentages are almost identical with those registered in 1963 (See Table 17). Again these percentages are quite comparable with the 27.9 percent of the nation's population who live in the Twelve-State Area.

As in the previous section which describes the total undergraduate enrollment, the Mid-East Region and the Far-West Region have higher proportions of resident undergraduate students in both 1968 and 1963. It is noteworthy that the relative rank of each region in this category, as a proportion of resident undergraduates attending public institutions, was unchanged over the five year period (See Table 18).

Looking at in-migration as a proportion of total undergraduate student body in public institutions, we find that Wisconsin and South Dakota had the highest proportions of in-migrants in 1968. This is quite a reversal of form. Wisconsin moved from eighth in 1963 to first in 1968. Illinois and Minnesota again had the lowest proportions of in-migrants in 1968 (See Table 19). The net migration picture is substantially the same in 1968 as it was in 1963. Michigan and Wisconsin had the highest net in-migration, although reversing positions in the 1968 figures. Illinois, Iowa, and Minnesota again had

net out-migration but, as indicated in the statistics, the Illinois figures were almost doubled in the five year period (See Table 20).

As indicated in the previous sections of this report, there is no attempt here to analyze the specific migration pattern of any of the states in the Area. The map on page 131 reflects the statistics found in Table 20. The map on page 132 indicates the proportion of the undergraduate student body in public institutions whose homes were in the Twelve-State Area. Maps (pages 133 to 144) are again presented for each state in the Area showing the actual exchange and for additional reference, United States maps are included (pages 145 to 156).

PART II

SECTION III

Undergraduate Students, Privately Controlled Institutions

The final section of this report is concerned with undergraduate students attending privately controlled institutions of higher-education. In this category the Mid-East Region, in 1968 as in 1963, had more students attending private institutions everywhere and also in that region, than any other region. Of the total, 33.6 percent of the undergraduates are from the Mid-East Region and 29.1 percent of the undergraduates are going to school in that region. Of particular note is the fact that while there was a substantial growth of 25.0 percent in total enrollment in private institutions, there was little if any change in the percentage of persons attending private institutions from 1963 to 1968 (See Table 21).

The Mid-East and the Far-West Regions again in 1968 as in 1963 had the highest proportion of resident undergraduate students attending private institutions. As in the previous section there was no change in the rank of the regions from 1963 to 1968 (See Table 22).

The pattern of undergraduate migration does show some variation between states during the last five years but the actual percentage rates showed little variation in 1968 from those recorded in 1963. Again in 1968, as in 1963, the states of Nebraska and South Dakota had the highest proportions of in-migrants. Illinois moved to the bottom of all states in terms of the proportion of in-migrants and was followed by Michigan, as North Dakota moved from last to ninth place (See Table 23). The net migration picture again

reflects in 1968 the same pattern as established in 1963. Indiana and Iowa had the highest net in-migration while Illinois and North Dakota had net out-migration, with the Illinois figure being about one-third larger in 1968 than in 1963.

As indicated in all previous sections of this report, there has been no attempt made to analyze the specific migration pattern of any of the states in the Area. The map on page 152 reflects the statistics found in Table 24. The map on page 163 indicates the proportion of the undergraduate student body in private institutions whose homes are in the Twelve-State Area. Maps (pages 164 to 175) are presented for each state in the Area showing the actual exchange. For additional reference, United States maps are included (pages 176 to 187).
